

# WORKSHOP

## On Fetal *RHD* Genotyping

**Time** 22 May, 15-17.30 (3-5.30pm)

**Place** University College Copenhagen  
Sigurdsgade 26, DK-2200 Copenhagen N  
Building A, Room 310

A discussion workshop on fetal *RHD* genotyping will take place the 22nd of May. The aim for the workshop is to give an opportunity to connect with colleagues in the field and exchange knowledge. This will be an interactive session where the participants will discuss relevant topics in smaller groups and later share the result of the exercise with the rest of the participants. We will start the session with choosing the most relevant topics. Some of topics which have been proposed so far include:

- the best transportation and storage temperature
- sample age, gestational week
- which controls to use for extraction and PCR
- external quality controls, what are used/needed
- interpretation of results (manual or computer)
- how to report the results
- level of investigations performed in samples when a maternal allele is found/  
prophylaxis recommendations
- assay design for immunized women, same as for *RHD*-screen or extended
- are guidelines needed/ already in place/ what to include

Should you have additional topics, you wish to discuss, please e-mail them to Dr. Åsa Hellberg, [asa.hellberg@med.lu.se](mailto:asa.hellberg@med.lu.se)

Please find two maps available on the cfDNA2019 website, one of Copenhagen with directions and one of the Sigurdsgade 26 complex of University College Copenhagen.

Looking forward to seeing you all for a fruitful afternoon,

Dr. Åsa Hellberg
